Washing machine 664326 WT72122

USP :

Partial AquaStop

The safety system automatically shuts off the water supply to the hose and the machine in case of a leak to prevent flooding. The pump automatically pumps out the remaining water from the drum into the discharge hose. Thus, the washing machine can be left to operate unsupervised, without any fear of flooding. High-end models feature a special sensor installed at the bottom of the washing machine. In case of a leak, the sensor will immediately cut off the supply of water into the appliance.
