### USP :

IonAir with MultiFlow 360°

Advanced technology in the refrigerators emulates the natural process of ionization to keep the food fresh longer. Negatively charged ions generated by the appliance continuously refresh the air to mimic a natural microclimate, thus creating the ideal environment for fresh food. The MultiFlow 360° ventilation system evenly distributes the ionized air through 14 ventilation slots to maintain constant temperature on every shelf.

AdaptTech: Adaptive Intelligent System

This smart system was devised to maintain the optimum temperature in the refrigerator regardless of its use. As a result, the food remains fresh and rich with vitamins as it is not exposed to thermal shocks caused by frequent opening of the refrigerator door.

NoFrost Plus

One of the best cooling systems in the market, installed in the freezer compartment, prevents the accumulation of ice and frost to keep the power consumption low, while in the refrigerator compartment, it maintains an ideal microclimate for fresh food. Circulation of ionized air prevents the food from drying out and retains its vitamins and minerals.

CrispZone with HumidityControl

ZeroZone drawer

The drawer with temperature around 0 °C is ideal for storing fresh or marinated meat, fish and seafood. It extends the freshness of delicate food and keeps its natural juiciness and nutrients.

XXL SpaceBox drawer

SuperCool

The intensive cooling function drops the refrigerator temperature by nearly a half of its usual. Ideal for rapid cooling of food after major shopping trips.

XtremeFreeze: very intensive freezing in the upper freezer drawer

Rapid freezing at extremely low temperatures. The shock-approach preserves all nutrients and the flavour of the food.
